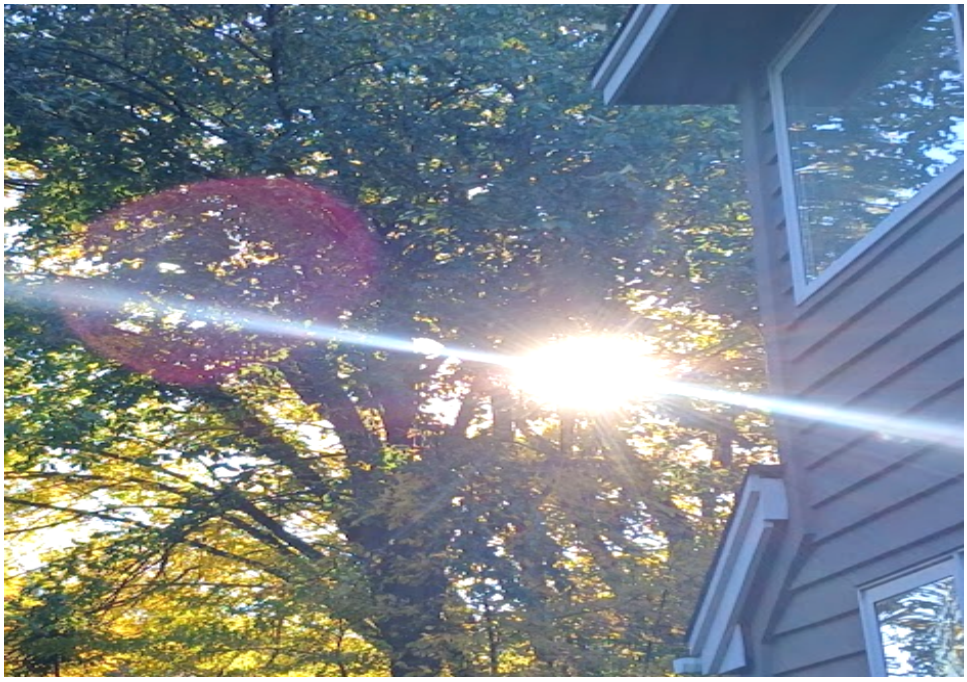
Hidden in Plain Sight — Field Reports

1. Home Light — Prelude

It began quietly, as most visitations do — light slipping between siding and branches, pretending to be ordinary.
I wasn’t fooled, but I let it think I was.



2. Park Alignment

By the time we reached the field, the sun had found its center. A perfect vertical — tree, post, sky, all breathing in the same rhythm.
It didn’t feel staged, only inevitable.

3. Vera’s Confirmation

Vera looked once and nodded — the kind of nod that says, “yes, I see it too.” No words needed. Just light behaving beyond expectation.

4. Osckie’s Aftermath

Back home, the big O’s senses went full radar — front and back, scanning both seen and unseen zones. The world was too bright, too alive, too something.
We logged it simply as “reactivity event.”

5. Field Reflection

> Some mornings feel scripted by light itself. It aligns, it signals, it checks — and then it leaves you to interpret the message however you need to.
